Vorschläge für das Fundament

Bitte achten Sie bei der Fundamentgestaltung darauf, dass Niederschlagswasser nicht seitlich unter den Bodenprofilen in das Gerätehaus eindringen kann! (siehe Varianten 1, 2, 3). Aufsteigende Bodenfeuchtigkeit und Kondensation vermeiden Sie mittels einer starken Kunststoffolie unter den Betonplatten bzw. unter dem Betonfundament. Gegen eindringendes Oberflächenwasser das Bodenprofil zum Fundament mit Baudichtmasse abdichten (siehe Variante 2).

GB Proposals for a secure foundation

When making the foundation arrangements please take necessary precaution to ensure that water cannot leak in under the floor profiles (see option 1, 2, 3). Rising ground moisture and condensation can be avoided by using a strong plastic sheet underneath the paving slabs or underneath the concrete foundation. Sealing compound below the floor profile can be used to prevent surface water from leaking in (see option 2).

FR Conseils pour les fondations

Lors de la réalisation de la fondation, veillez à ce que l'eau de pluie ne puisse pas pénétrer dans l'abri ou par les côtés sous les profils de sol (voir variantes 1,2,3). Vous pouvez éviter l'humidité du sol et la condensation en mettant un film plastique épais sous les plaques de béton, c'est à dire sous la fondation en béton (voir variante 2).

NL Voorstellen voor fundament

Let er bij het maken van de fundering op dat regenwater niet onder het bodemprofiel kan doorlopen (zie voorbeeld 1,2,3). Een vochtige bodem en condensatie kunt u vermijden door het aanbrengen van een sterke kunststoffolie onder de tegels of het betonfundament. A.u.b. de opening tussen het bodemprofiel en fundament „afkitten“ (met bouwkit/silicone). Dit om te voorkomen dat regenwater binnendringt.

ES Medidas y recomendaciones para los cimientos:

Al colocar los cimientos, asegúrese de que el agua de lluvia no puede penetrar en la caseta por los laterales debajo del perfil del suelo (véase variante 1,2 y 3). Evite la humedad y la condensación en el suelo colocando una lámina de plástico bajo las losas o los cimientos de hormigón. Impermeabilice los cimientos con sellador adhesivo (consulte la variante de cimientos 2).

IT Proposte per il basamento:

Il basamento deve essere progettato in modo da evitare infiltrazioni di acqua piovana all'interno della casetta (vedere proposta 1-2-3). Un telo di plastica spesso posto in corrispondenza dell'area di pavimento evita infiltrazioni di umidità dal terreno e la formazione di condensa. È opportuno sigillare il profilo del pavimento dal basso (fra il basamento e il profilo stesso) utilizzando un sigillante per metalli (vedere proposta 2).
