Spectral power distribution in the range 250 nm to 800 nm. at full-load	 <p>The graph displays the spectral power distribution (SPD) of the light source. The x-axis represents wavelength in nanometers (nm), ranging from 380 to 800 nm. The y-axis represents relative power in percent (%), ranging from 0 to 100%. The curve shows a broad spectrum with a primary peak at approximately 600 nm, reaching nearly 100% relative power. There is a secondary, smaller peak at approximately 450 nm, reaching about 40% relative power. The power drops to near zero at 800 nm.</p>
If the light source contains mercury: instructions on how to clean up the debris in case of accidental breakage	Not Applicable
